

```
Libérer une liste
Comment faire ?

Pour chaque élément de la liste
Le libérer (free)
Passer au suivant
```

• Quel est la signature de la fonction ?

```
cellule_t *Liberer_liste(cellule_t *liste);
```

Libérer une liste

```
cellule t *Liberer liste(cellule t *liste){
      cellule t *tmp;
      while(liste !=NULL){
             tmp=liste->suivant;
             free(liste);
             liste=tmp;
      return NULL;
                                        Jeu de test:
                                            Cela marche t-il:
int main(){
      cellule t *ns;
                                                  - pour une liste quelconque?
      ns=cons(1,cons(2,cons(3,NULL)));
                                                 - pour une liste vide?
      ns=Liberer liste(ns);
      ns=Liberer liste(ns);
      return 0;
```
